

Can You Have a Green City on a Brown Lake?

Professor Kimberly Gray

Department of Civil and Environmental Engineering

JUNIOR SCIENCE CAFÉ

Saturday, March 21, 11 AM—12:30 PM at Boocoo Cafe— 1823 Church St., Evanston
Open to grades 6—12 students and their parents Free admission, light lunch

How have the Great Lakes changed with settlement, industrialization and the growth of our large mid-western cities. What's the value of the Lakes to our region? Has human use irreparably altered the Lakes? In these times of climate change, can we hope to see continued improvement or unintended deterioration in Great Lakes quality?
