HOUSE BY NORTHWESTERN: Sustainability Without Compromise

presented by Dick Co

Research Professor of Chemistry | Weinberg College of Arts and Sciences

Faculty Director | House by Northwestern

Northwestern University

Wednesday
January 24, 2018
6:30 - 8:00pm

The Firehouse Grill
750 Chicago Avenue
Evanston

With the use of new building materials and methods coupled with smart technologies, living sustainably no longer equates compromising on comfort or aesthetics in one's own home. In addition, doing good for the environment by reducing waste and conserving resources also means doing well for our wallets. *House by Northwestern* is the University's first ever entry to the U.S. Department of Energy's Solar Decathlon competition, where the team won 1st place finishes in the Market Potential and Communications contests, and 3rd place in Engineering at the October 2017 international event. This presentation will share the journey and lessons learned by the *House by Northwestern* team, sustainable technologies that are ready for Evanston homes, and the team's next exciting project.

Science Cafe: Eat. Drink. Talk research in a relaxed atmosphere.

We are committed to promoting engagement with scientific topics and making it accessible to all.
